

Don't let tooth loss age your smile!

MONKSTOWN DENTAL
NEVER STOP SMILING

Implant Supported Bridge

Would you like to replace several missing teeth, a failed bridge or a partial denture? We can help.

“ *Just to say a very big thank you, for the great work you did with my implants.*

I have just had my lovely new teeth fitted this morning and am delighted with them! ”

Pat, Jordantown

As if nothing ever happened...

At Monkstown Dental we can help you or a loved one regain their confidence and their smile by giving you a new set of teeth or denture which is held in place by dental implants.

It's your choice.

Ask yourself the following questions.

- Do you have poorly fitted partial dentures or a failing tooth supported bridge?
- Are you unable to chew food properly and eat what you want?
- Does food get stuck under your denture leading to embarrassment or discomfort whilst eating?
- Do you have loose teeth or not enough teeth to support a bridge?

The best solution.

The tiny titanium screws are a medical miracle. When the smile suddenly looks old, several teeth are missing or older dentures are causing more and more problems, you can turn back the clock and your teeth can look new again.

If three or more teeth in a row are missing, you can decide to have an implant borne bridge. This means that the new crowns are linked together and - depending on the size of the gap - are placed on a stable secure base of two or more implants.

We're here to help.

At Monkstown Dental we can provide you with a permanently fixed bridge supported by implants. The benefits will change your life. Not only does it mean that you can eat anything you choose but they will also look, feel and work like natural teeth.

Fixed in place, there is no need to remove them to clean them. They should also last you a lifetime with good oral hygiene and professional maintenance.

Placing and restoring implants since 2001, Philip receives referrals from many local dentists. He is committed to continued education and is a member of the Association of Dental Implantologists and SAAD attending training courses all over the world.

“Dental implant treatment is a very successful way of giving patients restorations that look, feel and work, as those they have lost. It has become one of my most popular treatments with patients telling me they wished they had done it sooner!”
