

Don't let tooth loss age your smile!

MONKSTOWN DENTAL
NEVER STOP SMILING

Single Tooth Implants

**Would you like to replace a
single lost tooth? We can help.**

“ Philip gave me a detailed explanation of every step involved in my treatment and helped me feel at ease. Now I have a confident smile which means that when I take customers out for lunch I no longer worry that my tooth will let me down .

A job well done in my opinion and worth every penny. ”

Glen, Northern Ireland

As if nothing ever happened...

Anyone can lose a tooth. It happens in seconds: playing a sport and a tooth is gone like that. At Monkstown Dental we can help you replace a single tooth with a dental implant.

It's your choice.

Ask yourself the following questions.

- Have you had a tooth extracted due to trauma, infection, failed root fillings and/or root fracture?
- Does your crown keep falling out and/or there is not enough tooth left to attach a crown?
- Do you keep experiencing repeat infections?
- Do you have a permanent tooth missing from birth?

The best solution.

An implant-borne crown does not need retainer clasps. It is not necessary to grind down any teeth. The implant also retains the natural shape of the jaw bone. Dental implants imitate the anatomy of the natural tooth root, so the bone and gum are correctly loaded and shaped. No one will detect the tiny difference, not even you. Your new tooth is used in exactly the same way as its natural neighbours. You take care of it in exactly the same way, and will stay in place - even if you play sport vigorously.

We're here to help.

At Monkstown Dental we can provide you with a single tooth dental implant to replace that gap in your smile. The benefits will change your life. Not only does it mean that you can eat and brush as normal but the implant will also look, feel and work like a natural tooth.

Fixed in place, your dental implant should last you a lifetime with regular check ups and professional maintenance.

Placing and restoring implants since 2001, Philip receives referrals from many local dentists. He is committed to continued education and is a member of the Association of Dental Implantologists and SAAD attending training courses all over the world.

“Dental implant treatment is a very successful way of giving patients restorations that look, feel and work, as those they have lost. It has become one of my most popular treatments with patients telling me they wished they had done it sooner!”
